

Blackout Shade

Blackout Shades control sunlight with the touch of a single button

Blackout Shade

Projected light. Ambient light. At one time you couldn't have both at the same time. Now, with Stewart's advancements in projection screen technology, you can view a clear, sharp, vibrant image even with a lot of ambient light. Whether it's a conference room with lots of windows or a residential media room with a gorgeous view to the mountains, it's possible to control the amount of light (and heat) entering the windows. For those situations, Stewart provides the Blackout Shade.

Who better than Stewart in knowing the importance of light control in achieving the perfect display experience? Since sunlight must be taken into account during the design of any multimedia projection system, the Blackout Shade is just another way that Stewart can help achieve the best possible image in any environment, under any circumstance.

The Blackout Shade is engineered to be simple to install, easy to operate, and pleasing to look at. The Blackout Shade is whisper quiet, using the latest in quiet-motor technology including Lutron QS and Legacy 120v. Stewart supplies exclusive mounting hardware and fascia. A Headbox Pocket system is also available for recessing the roller into the ceiling. When the shade is installed, the hem-bar can be exposed or enclosed based on preference.

The Blackout Shade is completely customizable to match the style and color of the customer's existing décor with a Mermet shade fabric designed for durability. Other fabrics are also available upon request.

The Blackout Shade is a perfect compliment to Stewart's stylish and designer friendly Cabaret Screen, which unobtrusively brings front screen projection into any décor.

What you expect from Stewart projection screens is what you can expect from Stewart's Blackout Shade. Quality. Convenience. Elegance.

FEATURES:

- Hem-bar can be exposed or enclosed
- Side and Sill Channels (custom colors available)
- Fascia can be placed inside or outside the sill
- Headbox Pocket System to recess roller into ceiling (optional)

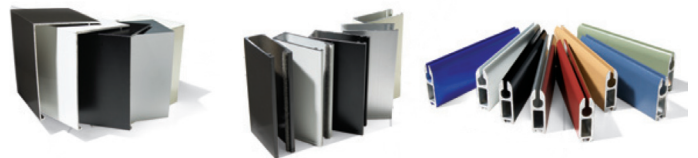

TECHNOLOGY MADE SIMPLE

Motorized Blackout Rollershade
The motorized shades create a total blackout effect with blackout fabric and Light Lock kits that include side and bottom sill channels to prevent light from entering at the edges.

Easy Operation
As the day goes on, the amount of light that enters a given window changes continually. Use the convenient remote control to adjust shades individually or as a group.
